EDUCATION

Johns Hopkins University
Bachelor of Science, Computer Science

Aug 2023 - May 2027
Baltimore, MD

TECHNICAL SKILLS

- **Languages:** Java, Python, C/C++, JavaScript, HTML, CSS, Assembly, SQL, Solidity
- **CAD Softwares:** SolidWorks, Creo Parametric, Rhinoceros 3D
- **Developer Tools/Software:** Git, Github, VS Code, IntelliJ, PyCharm, Linux, Unix, MySQL, Google Cloud Platform, Replit, CodePen, Node.js, pNPM, Docker, React, ORMs, Postman, Bitcoin/Ethereum Blockchain
- **Design/Creativity Tools:** Figma, Adobe Photoshop, Canva
- **Productivity Software Applications:** Microsoft Office Suite, Google Suite, Microsoft Teams, Slack, Zoom

EXPERIENCE

American Foundation for the Blind (AFB)

Jun 2026 - Present

Digital Accessibility Bootcamp Intern

- Pursue a 3-month digital accessibility bootcamp where I design inclusive software using JavaScript in PyCharm, apply accessibility principles, and explore assistive technologies, resulting in a prototype web page that meets WCAG 2.1 AA criteria
- Utilize screen readers and iOS accessibility features to evaluate user experiences, applying findings to web development practices that improve usability for people with disabilities, and document key accessibility issues that guide design revisions
- Collaborating on team-based projects and technical workshops with accessibility specialists and industry professionals to strengthen inclusive design and testing skills.

Johns Hopkins University

Jun 2025 - Aug 2025

BDP Summer Fellow and Research Assistant

- Developed computational tools using HTML, JavaScript, and C++ and created Afrofuturism-informed qualitative educational materials to support the R-RIGHTS initiative, enhancing the program's curriculum resources
- Assisted in development of the R-RIGHTS and accompanying 400 Years+ Project website, integrating archival information/resources and interactive storytelling features.
- Collaborated with Dr. McGee and post-doc mentors on qualitative and computational research for STEM conference proposals and publications, preparing historical and qualitative datasets for analysis and public presentation.

Johns Hopkins University Department of Chemistry

Mar 2026 - Present

Chemistry Stockroom and Logistics Assistant

- Maintained and updated inventory and ordering databases to support accurate tracking of laboratory materials, shipments, and stockroom activity.
- Processed incoming deliveries by scanning packing slips, logging shipment data in the database, and organizing materials for research group pickup, ensuring timely availability of supplies for experiments
- Improved inventory accuracy and workflow efficiency through consistent database updates and verification procedures in a fast-paced lab environment.
- Managed independent daily stockroom operations with minimal supervision while supporting logistics for multiple university research groups.

PROJECTS

Tennis Statistics Database

Jan 2026 - May 2026

- Designed and implemented a full-stack tennis analytics database system covering ATP and WTA match data from 1968–2024, modeling 9 relational tables in 3NF with an ISA specialization hierarchy and multiple many-to-many relationships.
- Built an automated Python ETL pipeline processing 50+ years of raw CSV data from open-source repositories, handling cross-tour ID collisions, misaligned column formats, duplicate ranking entries, and NULL statistics for pre-1991 matches.
- Developed a PHP/MySQL web interface with 15 interactive queries, AJAX-powered player search with debounced live database lookup, and Chart.js visualizations; optimized query performance via BTREE/HASH index selection and session-based caching.
